

Bachelors Computer Applications

PSO 1: Prepare the ability to understand, analyze and develop computer programs in the areas related to algorithms, web design, application program and database for efficient design of computer-based systems of varying complexity

PSO 2: To make them understand fundamental theoretical and practical concepts in Computer Science.

PSO 3: Build the ability to adapt to an ever-changing technological landscape.

PSO 4: Impart capability of solving a wide variety of problems by applying principles of computational thinking.

PSO 5: Inculcate habits of working effectively and professionally on diverse project teams.

PSO 6: Induce the ability to communicate technical information clearly and effectively, both orally and in writing.
